Description								
Electric receptacles maintained by the Department of Natural Resources at state park campsites								

Assumptions Used in Arriving at Fiscal Estimate

AB 62 increases the current cap on the percentage of state park campsites that may have electric receptacles from the current 25 percent to 30 percent. In addition, this bill creates a provision that limits the percentage of campsites with electric receptacles to no more than 50 percent in any single state park.

The Department estimates that increasing the current cap on the percentage of state park campsites that may have electric receptacles from 25 percent to 30 percent will increase revenues to the Department. The Department currently has an estimated 3,955 campsites. Of these, 800 are electrified sites, and another 178 electrified sites are planned. Current law provides that the Department may have no more than 25% of all sites electrified, or 988 of the total 3,955 existing campsites. Under this bill, the Department would be allowed to have as many as 1,186 electrified campsites, an increase of 208 over the existing and planned electrical sites (1,186 - 978), and stay within the limits of the 30% restriction. The Department assumes that 208 additional electrified sites would generate an additional \$135,800 per year given current occupancy trends (208 sites X \$5/night electrical rate X 191 camping nights per season X 68.37% occupancy rate).

The Department assumes that increased operational costs (e.g., utility costs) associated with adding additional electrified campsites would be an estimated \$390 per site, or \$81,120 for an additional 208 sites allowed under the 30% limit. The Department assumes these increased operational costs could be offset by the additional revenue. Additionally, if the Department were to increase the number of electrical sites by 208 in accordance with the 30% limit, one-time construction costs of \$540,800 will be incurred (208 X \$2,600) to install electric service at the campsites. The Department assumes that it would only incur these additional operational and one-time costs if expenditure authority were provided.

Long-Range Fiscal Implications

None
