Affected Chapter 20 Appropriations

Assumptions Used in Arriving at Fiscal Estimate

Currently, each license which authorizes archery deer hunting includes one carcass tag that is valid for taking an antlered buck in any management unit and one tag which is valid for one antlerless deer in any management unit. This proposal would limit the areas where the antlerless carcass tag is valid to only management units for which an antlerless deer harvest quota has been established and CWD units.

Under current rules, firearm season hunters are not allowed to harvest antlerless deer in zero quota units but archery hunters may. Eliminating archery hunter's ability to harvest antlerless deer in units for which no antlerless quota has been established will make regulations more consistent between the firearm and archery seasons. In deer management units that are below their overwinter population goals, reduced antlerless harvest will help to achieve overwinter goals by allowing additional population growth.

This proposed rule does not create license types or new license issuance procedures. It will require updating printed instructions on carcass tags which can be done when annual updates are made and will result in no fiscal impact. It is not anticipated that this change will have an impact on license sales because the harvest of antlered bucks is still allowed in all units statewide. The ability to harvest an antlered deer is, for most hunters, the primary feature of the archery deer hunting license. Additionally, the harvest of antlerless deer will still be allowed in most units.

In 2009 there were 13 units for which no antlerless harvest quota was established out of a total 144 units including state parks.
