This rule restricts the import of certain plants, wood and wood products to prevent the introduction of thousand cankers disease of walnut trees into this state. Thousand cankers disease is an emerging fungal disease that can be carried by the walnut twig beetle (the beetle is native to this country). The disease is currently known to exist in the states of Arizona, California, Colorado, Idaho, Nevada, New Mexico, Oregon, Tennessee, Utah and Washington. Thousand cankers disease has not yet been found in Wisconsin.

The disease poses a serious threat to black walnut trees, an important forest species in Wisconsin. Black walnut is known for its highly valuable lumber, which is used for finished products such as furniture, musical instruments and gun stocks. There are approximately 18.5 million black walnut trees in Wisconsin, with over 13% of them located in the southwestern part of the state. Wisconsin businesses export over \$4 million in black walnut products annually.

Thousand cankers disease may be spread by the movement of firewood, nursery stock, and unfinished or untreated wood products. Subject to certain exemptions, this rule restricts the movement of potential host materials into Wisconsin, if those materials originated from or were exposed to the environment in an area where thousand cankers disease is known to exist.

Impact of the Proposed Rule on State Government

This rule will not have a significant fiscal impact on state government. The Department of Agriculture, Trade and Consumer Protection (DATCP) will incur some added inspection and monitoring costs, but will minimize those costs by integrating inspection activities under this rule with other plant pest inspection and monitoring activities. DATCP will absorb the added costs with current budget and staff. This rule will have no fiscal effect on local governments.

Impact of the Proposed Rule on Local Government

This rule will have no fiscal impact on local government.
