b. Quota areas are composed of single management units or parts of units, the boundaries of which are established in section NR 10.24, Wis. Adm. Code.

c. In each quota area, the number of party permits to be issued to harvest the indicated number of deer is determined by an average of the hunter success rates from the most recent 3 previous seasons or by an average of fewer seasons where a 3-year average is not available. In establishing a quota for an area without an adequate history of party permits, the average success rates of similar quota areas are applied.

d. Party permit success rates used to compute the number of permits to be issued for each management unit are those published by the department in annual deer season reports.
