The department shall issue party permits, antlerless permits or hunter's choice permits in sufficient numbers to assure maintenance of overwintering deer populations for each quota area indicated in subd. e.

b. Quota areas are composed of single management units or parts of units, the boundaries of which are established in s. NR 10.28.

c. In each quota area, the number of permits to be issued to harvest the desired numbers of deer shall be based on an average of the hunter success rates from the most recent 3 previous seasons or by an average of fewer seasons where a 3-year average is not available. In establishing a quota for an area without an adequate history of permits, the average success rates of similar quota areas shall be applied or the department shall estimate an anticipated success rate.

d. Permit success rates used to compute the number of permits to be issued for each quota shall be those calculated by the department from annual deer season harvest reports except where no previous history of success rates exist.

The success rate formula is:

$$\text{Success rate} = \frac{\text{Number of antlerless deer harvested}}{\text{Number permits issued}}$$

The permit number formula is:

$$\text{Permit number} = \frac{\text{Quota deer to be harvested}}{\text{Hunter success rate}}$$
